

Clinical Psychologists F/M

Doctors Without Borders (Médecins Sans Frontières, MSF), an international humanitarian medical association created in 1971, provides medical assistance to populations in need: most often in the case of armed conflict, but also during epidemics, natural disasters and those excluded from care. MSF France is currently working in 30 different countries.

We are urgently seeking some **Clinical Psychologists - F/M**.

Operational Contexts

Psychologists perform a variety of tasks with MSF, depending on the project and the context: within a hospital program, psychiatric consultations, addressing specific trauma (armed conflicts, sexual violence), certain illnesses (AIDS, TB) and/or treating minors.

Psychologists collaborate with MSF health personnel to provide clinical work, as well as managing and training locally employed staff. The ability to work in a multicultural and multi-disciplinary team is a must. In the majority of our programs, it is national staff (usually made up of psychologists) that ensure the continuity of care of our patients.

International mental health staff are responsible for the following tasks:

- Participate in the planning, organization and coordination of Mental Health activities, in close collaboration with other medical team members.
- Supervise the daily mental health activities and patient support according to MSF protocols and standards
- Ensure that MSF guidelines and medical treatments (psychotropic drugs listed in standard MSF guidelines), are available and well understood.
- Provide support to the project and the team by sharing ideas on how to improve our care, in accordance with MSF's strategy and objectives.
- Supervise, in close coordination with the HR department, the associated processes (recruitment, training/induction, evaluation, potential detection, development) of the staff under his/her responsibility to ensure both the sizing and the amount of knowledge required.
- Offer clinical supervision to the mental health clinicians
- When needed, give psychological support to patients (individual/group) according to MSF protocols to improve mental health conditions of patients and enhance their functionality.
- When necessary, organize the referral of patients to the program's psychiatrist or identified appropriate structures.
- Compile the data and statistics linked with MH activities and report it.
- Ensure patient-related information is kept confidential
- Collaborate with the Medical Team Leader to resolve issues and provide the best medical care possible.

A mental health team usually is composed of a psychiatrist and a psychologist.

Usually, psychologists work with interpreters, and their quality of work and emotional capacity to provide translations must be ensured.

Profile

Experience/Education :

- Must have worked at least 2 years full-time providing clinical psychological care (excluding work experience during the Master's degree) subsequent to obtaining the equivalent of France's DESS or Masters II in clinical psychology ;
